FOR SOFTWARE & TECHNOLOGY

NUJUM ALANZIMA
FOR SOFTWARE & TECHNOLOGY

We innovate solutions, connect systems and shape the future.

Integrated software and technology solutions for enterprises.

COMPANY PROFILE

JEDDAH, SAUDI ARABIA

Your technology partner for business growth

We are a Saudi company developing software and technology solutions for enterprises. We combine business insight with engineering expertise to help organizations modernize systems and improve operational efficiency.

How we work

We treat applications, networks and databases as one connected ecosystem, designing scalable, maintainable solutions aligned with project needs and business objectives.

What sets our approach apart

Understanding your business

We begin with real operational needs and challenges before defining the technical solution.

Designed to scale

Solutions that grow with your business and are built for maintenance and evolution.

Connected ecosystems

Applications, infrastructure and data integrated into a cohesive operating environment.

Operational focus

Ease of operation, documentation, security and business continuity.

Technology that serves business and growth

Our vision

To be a distinguished technology partner, building integrated digital ecosystems that support sustainable growth.

Our mission

To deliver practical, reliable technology solutions that combine execution quality, business understanding and continuous service improvement.

Values that guide every partnership

Commitment

Transparency in delivery.

Quality

Reliability in practice.

Partnership

Long-term relationships.

Innovation

Practical innovation.

Why Nujum Alanzima?

Technical expertise aligned with operational goals, multi-system integration, attention to security and continuity, and solutions designed for effective management and maintenance.

Integrated solutions, connected impact

We bring software and infrastructure services together to build more efficient, connected operating environments rather than isolated components that are difficult to manage or extend.

Software development

Business applications, web platforms, automation, interfaces and databases.

ERP systems

ERPNext and Odoo solutions aligned with business processes.

Electronic invoicing

Technical integrations and e-invoicing workflows.

Networks & connectivity

LAN/WAN, site connectivity, VPN and SD-WAN.

Network security

Access controls, firewalls, segmentation and configuration hardening.

Servers & data

Server administration, databases and backup.

Systems integration

Connecting financial and operational systems and exchanging data.

Ongoing support

Operations, monitoring, troubleshooting and change management.

Digital solutions built around your needs

Software development

We analyze business processes and turn them into scalable digital applications and services, with a focus on business logic, usability and integration.

Web and internal applications | UI | Databases | REST APIs | Automation | Modernization

Enterprise resource planning (ERP)

ERPNext and Odoo solutions based on business process assessment and appropriate configuration, customization and integration.

Accounting | Sales | Purchasing | Inventory | HR | Reporting | Access and workflows

Electronic invoicing

Technical solutions to organize document issuance and integrate accounting and commerce systems in line with ZATCA technical and regulatory requirements.

Requirements analysis | XML | Signing | QR | Integration | Testing and maintenance

Systems & data integration

We connect financial, operational and commercial systems through clear data exchange mechanisms, reducing duplicate entry and improving consistency.

REST APIs | Database integration | Synchronization | Error handling | Analytics

Reliable infrastructure, more secure operations

Networks & communications

Design and implementation of local and wide-area networks and site connectivity, with emphasis on connection quality, security and manageability.

Routing & switching | VLAN | IPsec VPN | SD-WAN | Traffic policies and documentation

Cybersecurity

Strengthening network and service protection with controls suited to the client environment, reducing risk and unnecessary access.

Firewalls | Segmentation | Access policies | Configuration review | Event logging

Servers & infrastructure

Setup and management of Windows and Linux servers, virtualization environments and storage solutions.

Databases | Backup and recovery | Performance | Capacity planning | Cloud or hybrid

Support & managed services

Support, maintenance and enhancement within agreed project and service scopes to sustain stable technology environments.

Monitoring | Troubleshooting | Documentation | Improvement | Change management

An integrated operational perspective

Security, continuity, documentation and maintainability guide our design and delivery decisions.

Clear milestones, dependable delivery

A structured methodology adapted to each project, covering the lifecycle from requirements discovery through launch and ongoing support.

01 Discovery

Understand requirements and the client environment.

02 Design

Define the appropriate solution.

03 Implementation

Deliver technical components.

04 Testing

Validate quality and effectiveness.

05 Launch

Go live and hand over.

06 Support

Monitor and improve continuously.

Delivery governance

We document changes, acceptance criteria, production transition plans and rollback procedures to support clear execution and service continuity.

Post-launch support

Operations & monitoring

Monitor environments and resolve operational issues.

Continuous improvement

Ongoing development and structured change management.

Documentation & knowledge

Technical documentation for administration and maintenance.

Response & resolution

Diagnose and resolve issues within the agreed scope.

Network solutions that support business continuity

Al Wisam World network modernization

CASE STUDY / PHASED IMPLEMENTATION
Connecting headquarters and branches through a more secure and manageable network architecture.

Client

Al Wisam World

Project status

In progress — phased implementation

Site scope

Headquarters and branches

Technologies

Fortinet | IPsec | SD-WAN

Scope of work

Modernizing network infrastructure and connecting headquarters and branches using Fortinet solutions, with a phased transition from existing connectivity.

Technical components

FortiGate 120G and 50G, IPsec VPN, SD-WAN, segmentation and access policies, prioritizing continuity of operational systems and databases.

Ready to be your technology partner

We innovate solutions.
We connect systems.
We shape the future.
